Building AI Agents: Advanced Techniques for Developers

4h 41m · 4 items · Advanced · Updated September 2025

2 Instructors

89 learners

Master the rapidly growing field of AI agent building, where developers create AI systems that think and act independently. This learning path helps Python developers, automation engineers, and ML practitioners get ready to create the next generation of intelligent applications. Learn how to architect multi-agent systems that collaborate and solve complex problems autonomously using cutting-edge frameworks like LangGraph, LlamaIndex, and Model Context Protocol.

🏆   Congrats, Learning Path completed on September 16, 2025!

What you'll learn

✓ **Create** autonomous AI agents using LangGraph and LlamaIndex.

✓ **Build** multi-agent systems with MCP and A2A protocols.

✓ **Deploy** production-ready agents that automate workflows.
